Full job description

Job Expectations

A career that makes a real difference.

Would you like to join a company that's currently redefining the future of Australia?

If so we have an exciting opportunity for a Senior Delivery Engineer API and Microservices, to join nbn on the journey of reshaping Australia's digital landscape.

A bit about your role

The Senior Delivery Engineer API and Microservices is a key technical contributor to software development activities within the Data Interchange Chapter focused on APIs, Microservices and Integration systems.

In your new role, you will be translating business scope into associated application logic, design, code and Engineering enablers. Undertaking Software Engineering delivery activities such as designing, building, testing and deploying within an Agile Delivery team to release high-quality and secure IT changes into nbn's production environment.

Acting as the subject matter expert for Engineering Chapter applications and supporting path-to-production as well as system reliability activities. Leaning in on Software Engineering key initiatives including general practice, process and productivity improvement activities and standing in for the Lead Delivery Engineer when required to provide both interim technical leadership and line management support.

A bit about you

The ideal candidate will have a solid background in custom application development and extensive experience working in a complex digital

environment, involving a mix of Front-End systems, Gateways, APIs, Microservices, Monoliths and SAAS platforms that form an integrated end-to-end Enterprise IT stack.

In addition to this, your experience may include a software development and testing background and hands-on expertise with DevOps tools and Cloud services, as well as familiarity with software engineering quality assurance and security practices.

Most of your experience may also include Java, Python programming and associated frameworks/development tools, Kubernetes and Serverless architecture, AWS cloud architecture and services, Messaging/streaming architecture and technologies (Kafka or equivalent), Jenkins CICD capability, Gateway systems (AWS API Gateway or equivalent), Application monitoring, logging and observability (New Relic, Splunk or equivalent) and Database, Cache technologies (Oracle, Elasticsearch or equivalent).

You may also be familiar with architecture principles, best practices and design patterns associated with API and Microservices development. Your work experience will preferably include building greenfield custom applications, decoupling Monoliths into Microservices and migrating applications into a Cloud environment. Telco domain (service qualification, service activation, service/network assurance, etc) experience would also be highly desirable.

Life at nbn

At nbn our people have a clear and shared purpose - empowering Australians to redefine the way they live, work and play into the future. As one of the Australia's largest infrastructure projects ever undertaken in Australian history, you'll be part of a team building a brighter future for the country.

In your personal career, you'll benefit from technical training for professional development, leadership programs and access to the latest technology, as well as being led by a diverse executive team.

nbn is committed to an inclusive, flexible and supportive workplace where everyone can feel valued, respected and have equal opportunity to thrive and succeed. We encourage applications from people of all ages, nationalities, abilities and cultures - including Aboriginal and Torres Strait Islander peoples, the LGBTI+ community and people living with disability. We're happy to adjust our recruitment process to support accessibility needs – we encourage you to advise us at the time of the application via recruitment@nbnc.com.au

We actively focus on our people having a fair go at reaching their career aspirations. We're committed to equal opportunities for all employees. With initiatives like Women's Leadership Programs, a commitment to equal pay, flexibility and market leading parental leave, we truly are paving the way for true equality in the workplace.
