Full job description

Our client is experienced supplying, fabricating and installation of structural steel. They have been in business for many years and due to a large increase in work are now looking for a structural steel detailer/drafter.

Software used is Tekla Structures Software or knowledge of CAD.

The right candidate will be able to understand and read engineering drawings, will have experience working on residential projects for steel erection and or Industrial , commercial.

You will have abilities / experience in :

- Ability to interpret architectural/engineers documents and translate those requirements to detailed drawings
- A sound knowledge of the building/commercial and industrial practices is essential
- Cad (Version 2000 or better) knowledge of Tekla Structures software
- Detailing of connections for beams, columns, bracing and other steel elements and determine belting and welding requirements
- Development and editing of detailed shop drawings and layout drawings for steel erection
- Sound knowledge of requirement of steel erector's requirements for layout details
- Produce detailed product listings and spreadsheets within Tekla Structures
- Describe weld types and procedures and apply weld symbols on drawings
- System administration and customisation experience in Tekla

You will have experience using Tekla and or of Autocad. Your attention to detail is essential.

This is a permanent role .
